

Agent in a Day (AiAD) Workshop

Build Intelligent AI Agents with Microsoft Copilot Studio

Microsoft's **Agent in a Day (AiAD)** workshop is a full-day, hands-on training designed to help business users, analysts and IT teams learn how to build intelligent AI agents using **Microsoft Copilot Studio** - no advanced coding required.

AiAD equips teams with practical skills to create AI agents that respond to employees, customers or suppliers at scale. The workshop blends instruction, guided labs and real examples to help participants begin designing agents tailored to their organization's unique use cases.

WORKSHOP FORMAT

The workshop is a virtual or in-person full-day, instructor-led training that includes:

- + An overview of Copilot Studio and AI agent design
- + Step-by-step hands-on labs
- + Practical scenarios based on real business needs
- + Guidance from certified Microsoft experts
- + Time for Q&A, troubleshooting and use-case exploration

WHAT PARTICIPANTS WILL LEARN

By the end of the workshop, attendees will be able to:

- + Build an AI agent using natural language
- + Use autonomous capabilities to automate multi-step tasks
- + Extend Microsoft 365 Copilot with custom actions and plugins
- + Integrate existing systems using out-of-the-box connectors
- + Create a starter agent that they can expand after the session
- + Apply governance and security best practices for responsible AI

WHY IT MATTERS

AI agents are becoming foundational to Microsoft's AI ecosystem. Learning to design and deploy them positions organizations to improve response times, reduce manual work, and maximize Microsoft 365 investments.
